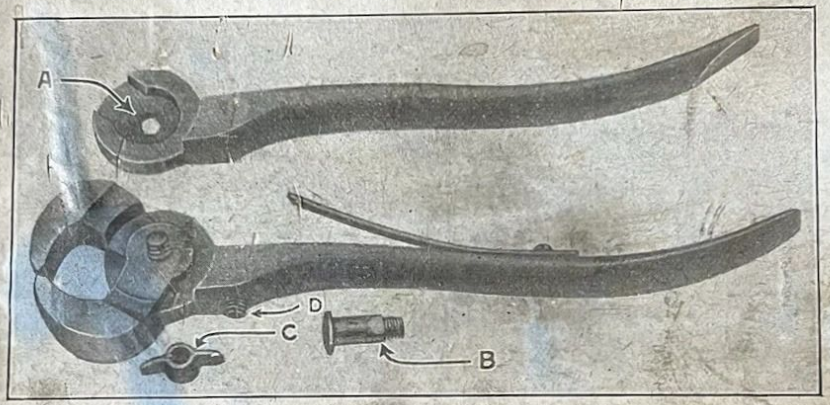
NO. A ☐ Leather Punch.

K. I. T.



NO. L ☐ Weed Chain Plier.

K. I. T.

Remove wing Nut "C" from center bolt, lift off top half of handle, take any head desired and set one part down in the recess of each handle so that the shank is flush with the face of the handle. See that the square shank "B" on bolt is in position to enter square hole "A" in top half of handle. Put the two parts together, then screw on the wing nut "C" tight as possible.

The spring shown on lower handle is used with heads A, E, F and J. When not in use is reversed.

When using head "K" adjust set screw "D" in handle so that when the handles are closed the cutting edges meet but do not strike.

When using head "J" adjust set screw "D" to allow punch to enter hole in anvil not more than one-sixteenth inch.
